

Seismic risk areas – Indicative only

Zones of risk are based on earthquake zone factor (Z factor), which represents the relative level of seismicity (a variety of factors that make up a region's seismic activity) for the building's location in New Zealand.

Risk of building damage:

- Higher risk
- Less risk
- Least risk

Disclaimer: This map is based on the hazard factors contained in NZ1170.5:2004 – Earthquake actions – New Zealand and subsequent modifications made after the Canterbury earthquakes. Source: www.eqc.govt.nz
